

Hospital Call Accounting Software

Hospitals use CASH+ Call Accounting Software to:

- Recover Telecommunication Costs
- Monitor Trunk Activity to Analyze Line Traffic
- Allocate Costs for Budgeting Purposes
- Provide Emergency and/or Custom Alert Notification

Features & Benefits:

Hospitals with structured environments need to enforce strict cost management and allocation measures to adhere to their projected annual budget.

With CASH+ Call Accounting Software all telephone activity is logged and long distance costs are efficiently allocated to specific departments.

By monitoring Trunk Activity, CASH+ provides useful reports for analyzing present and future line requirements as well as staffing necessities.

The need to identify threatening or harassing callers has become an issue for many facilities. Use CASH+ to produce reports that display incoming caller identification allowing you to isolate situations rapidly. Most business phone systems support this feature.

By installing a central PBX equipped with Call Accounting, and providing the client an extension instead of a phone line, the institution can resell telephone service and generate income.

Organizations such as Mayo Regional Hospital use our software and find that it has provided them with a valuable solution for their call accounting needs.
